(a) b moves the level; the mortality channel decides which side of one the gradient is on
participation rate, per cent
income of users / population average
participation rate (left)
income ratio, mortality ON (right)
income ratio, mortality OFF (right)
Stone Geary parameter b
(b) the gradient barely moves across the range where the model silently breaks
share with negative continuation value, per cent
households who would rather be dead (left)
income of users / average (right)
value of life constant ℵ
